

Incident Learning: What happened?

- On Saturday, 8 December 2018 at about 11:00, contractor workers were replacing roof sheets on a building. IBR(metal) sheets were being shifted into position from an elevated platform. During this task, one of the workers sustained a cut to the palm of the hand through their hand protection. The worker required additional medical attention and was treated at a nearby hospital before returning to work the same day

What are the learnings for implementation?

- Ensure that the risks assessment incorporates all aspects of the job.
- Ensure that the PPE used is suitable for the task being performed.
- Ensure that workers are familiar with EIM reporting guidelines.
