

Incident Learning: What happened?

- On Tuesday 17th September at approximately 16:20PM, a contractor worker sustained an injury to his right knee and hip.
- The worker was on his way home and while exiting the cabin as he approached the door he stepped down the 3 tier staircase with his left hand on the handrail.
- As the worker stepped off the last step on to the graveled area the stones gave way causing him to slip and hold the handrail, this action swung his body around resulting in the worker injuring his right knee.

The employee slipped in the graveled area leading to Knee injury.

What are the learnings for implementation?

- Always use your LPSA
- Keep your eyes on path
- Always use the handrail when using staircases.
