

Incident Learning: What happened?

On 09 July 2018 at approximately 11h00 while a CMS employee was descending a cat ladder on column E17001, he slipped and fell approximately 4.7 meters onto a beam and a further 1.7 meter onto pipes.

What are the learnings for implementation?

- Having a robust system to ensure that learnings from both shareholders are formally reviewed and that required actions are identified, allocated and implementation tracked.
- The housekeeping on elevated platforms must be improved to include the removal of bird's nests.
- Permanent restraining devices must be installed as soon as possible following the current standard as a guideline.
- Improve the current business process to review and adapt external learnings, including delivery milestones and roles and responsibilities.
