

Incident Learning: What happened?

Medical Treatment Case: laceration to little finger – requiring stitches

- 22 March a contractor employee was installing a gasket on a Heat Exchanger on Plant 3 (3E -1A/B) when the workers right little finger got pinched during the Heat Exchanger Boxing up Process.

Key Communication Points

- Be aware of pinched points when performing flange management, bolting unbolting or reconnecting pipework and vessels during boxing up operations.
- Always wear the appropriate (task specific PPE) when performing work activities and consult the PPE Matrix if uncertain.
- Ensure communication measures are well understood when working in teams and always follow safe work procedures/practices
